

SELF ACTUATING PRESSURE REDUCING VALVE

MODEL **PRV30**

## MAIN CHARACTERISTICS

Self-actuating pressure reducing valve balancing by piston used to provide a constant downstream with oscillations in inlet pressure.

Easy to adjust and doesn't need any maintenance. It's possible to install the valve in any position.

Maximum inlet pressure: 25 bar.

Pressure ranges: 0,2 – 2 | 1 – 8 | 4 - 12 barg

Temperature range: -30 to 80 °C.

### Fluids

Liquids and gases, group 2.

Compressed air, water, neutral gases ...

Body material → Stainless steel Aisi 316L

Trim material → Stainless steel Aisi 316L

Cover material → Stainless steel Aisi 316L

Connections → Threaded BSP or NPT  
→ Flanges DIN or ANSI

### More common applications

Chemical laboratory installations, sanitary plants, compressed air, sprinkler systems, ...

### Characteristics

It is easy to adjust; it does not need any maintenance.

It is possible to install it in any position; its internal design is conceived to provide an effective circulation of the fluid.

### Under request:

- reduced Kv available to:  
0,2 / 0,4 / 0,6 / 1 m<sup>3</sup>/h
- Bronze / Super duplex body/cover material
- Connection Socked weld or butt welding
- Connection clamp
- Degreased valve for oxygen services
- Soft seals: EPDM, PEEK, Viton, Aflas, ...

## OPERATION

PRV concept is direct action. Inlet pressure comes into the valve and closes it because of the sections difference.

When we compress the spring (10) through the regulating screw (9), the stem-seal (11, 17 and 3) opens the valve and allows the regulation.

When any downstream valve is closed and flow=0, PRV will absorb the oscillations and keep the outlet pressure according to the regulation.

The valve closes when the downstream pressure exceeds the regulating set pressure.

It is recommended to leave a space (between 0,5 and 1 meter) until the check valve, for a better compensation.

To increase outlet pressure, the regulating screw (9) should be turned anticlockwise.
